Tardive Dyskinesia (TD): A Timeline

Involuntary movements caused by antipsychotics that were different from other conditions such as drug-induced parkinsonism were first reported in medical literature. The term “tardive dyskinesia” was first introduced in 1964, highlighting the delay between the initiation of antipsychotic treatment and the onset of the abnormal movements (hence, the name “tardive”).

TD Awareness Week 2022 marks five years since the first legislative declaration by California in 2018. In honor of the fifth anniversary, take a look at how much progress has been made in TD education and awareness.

Healthcare providers continue to research and diagnose TD.

During the 70th anniversary of Mental Health Awareness Month and second annual TD Awareness Week, 27 states make declarations.

In the fifth year of TD Awareness Week, efforts continue to increase and broaden awareness about the condition and reach all 50 states.
